

Course overview:

ITIL Service Level Management

(c2609eng)

Overview and objectives

Information Technology Infrastructure Library (ITIL) was developed in England in the 1980's for the Central Computer and Telecommunications Agency (CCTA), an agency of the British Government. By collecting the best practices from top companies, the CCTA established a best practice process framework called ITIL, which includes a description of how to organize service management within an organization. All the companies who contributed their best practices then adopted this guide.

This 2-day course will encourage all employees to participate in the success of their companies by aligning IT services with the current and future needs of the business and its customers, improving the quality of the IT services delivered, and reducing the long term costs of service provisions.

Target audience

Lower to Middle management

Employees who support Service Level Management

Course prerequisites

Students should have at least 1 - 2 years of IT experience and have attended the 'ITIL Foundations' course.
